ABOUT ME

Above all, I pride myself on the creative discipline I bring to all aspects of my work. As part of this rigour, I practise lifelong learning: I love acquiring new skills and challenging myself with a wide variety of projects. I enjoy working within professional cultures that value innovation, diversity, and collaboration, and I appreciate the range of divergent perspectives and practices that I encounter as a member of the tech community.

EXPERIENCE

Jaxsta

October 2019 - present || Frontend Engineer

In my role, I am involved in various aspects of product development. My key responsibilities include:

- writing production code for the frontend application
- working closely with our backend developers, as well as third parties, on the shape and ingestion of internal and external APIs
- maintaining quality data in our Postgres database and working on entity recognition/manual merging processes
- working closely with the UI & UX design team to translate their ideas and end-user requirements into effective technical solutions.

General Assembly

August 2019 - November 2019 || Instructional Assistant (Contract)

My role supported teaching and learning in a part-time Front-end Web Development course over ten weeks. My key responsibilities included:

- facilitating learning activities in collaboration with instructors
- enabling students to learn HTML, CSS and JavaScript
- assisting students with problem-solving.

Squiz

October 2018 to October 2019 || Junior Web Developer

My role involved working across various projects for numerous government departments. My key responsibilities and achievements included:

- using CSS & Javascript libraries to create browser animations for clients
- using Google Translate API to translate our site into different languages for bilingual projects
- integrating three new API endpoints for the improvement of an existing government price comparison site, as a sole developer.
